

Energy Metering System Capabilities from SRB Controls Inc

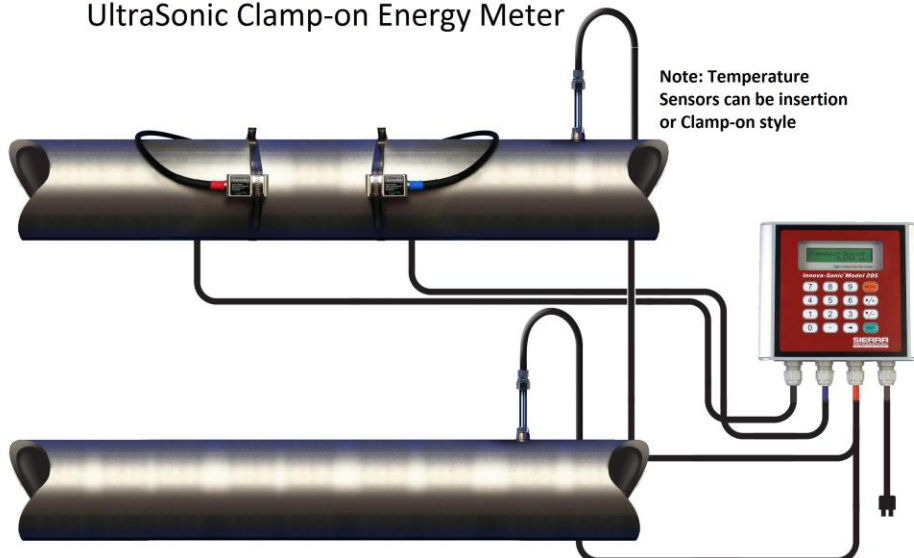

For over 25 years SRB Controls Inc. has been providing clients with flow and temperature measurement instrumentation. We provide engineering and technical support for different configurations of Cooling and Heating Energy Metering Systems.

For district energy plants or facilities with large line sizes we can offer a Magnetic Flow meter with a separate Energy Flow computer or a non-intrusive Clamp-on Ultrasonic energy flow meter. See diagrams below

Cooling or Heating Energy Meter System (Magnetic Flow Meter)

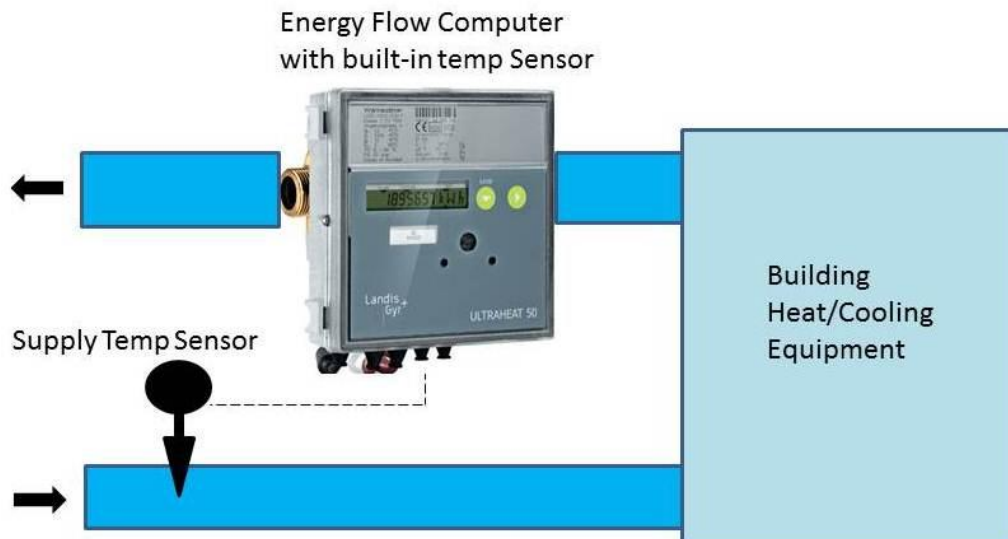

UltraSonic Clamp-on Energy Meter

For smaller lines (4" and less) you can use one of the two types of systems above or purchase a compact and economical Heating and Cooling system from Landis + Gyr

Heating &/or Cooling Energy System - Landis + Gyr

SRB Controls' service department provides commissioning and after sales support. If required we offer yearly inspection and site calibration services.
